Subject: Data on Portal

Arron,

When you get on the portal, click on "files" on the left margin and you will pull up all of the Portland Harbor related files. Under "sub pages" there is a "data" option (there is also a "GIS" option you might want to take a look at). Anyway, the data is organized by the round of sampling (we only have 1 and 2 so far). Round 1 just included tissue and sediment data. Round 2 included surface water, sediment, bioassay (toxicity), and groundwater (transition zone water) results. More data is still to come for Round 2, but we will have to pull that in when we get it.

If you go to Round 2 and click on "surface water" you will see two different sampling events, one for July and one combined for March and November. However, they are both in "SCRA" format, so I have requested the raw data. Under "ground water pathway" you will find transition zone water sampling results that have been put on the portal recently (3-16-06). I think the last one down is the raw data for that event. The other two are in "Query manager" format and "SCRA" format.

Rob has some insight into using these files as well, so I am sure the meeting on Monday will help inform you. It might just help get oriented.
